TR-T Model Spring Brakes

These models are characterized by the same quality design features of our world-famous TR model lineup, with the addition of an “External Breather Tube”. This feature prevents contaminants from entering the spring chamber. TR-T models are ideal for tough applications – ready-mix cement trucks, dump trucks (end dumps, belly dumps, etc.), refuse and other vehicles that typically operate in harsh, dusty environments.

KEY FEATURES

- External breather tube seals out contamination
- Heavy-duty nylon reinforced diaphragms
- Heavy-duty nylon reinforced neoprene diaphragms (optional) diaphragms (center hole design on some models)
- Center hole shield prevents entry of contaminants
- Heavy-duty steel non-pressure chamber

X - Min. (in the caged position)	8.00"						

NOTE: (a) This model must be used only in combination with MGM Brakes heavy-duty weld reinforced mounting base or 8-gauge non-pressure housing. Product information and specifications subject to change without notice.

TR-THD Models – In addition to all of the above features, these models substitute a heavy-duty power spring that provides approximately 158 lbs. more force output @ 1.25 inches of stroke over the standard power spring. A great choice for applications requiring extra parking capability. Perfect for high-tonnage dump trucks, ready-mix cement trucks and refuse haulers.

TR-LP3T Models – In addition to all of the above features (including heavy-duty power spring), these models are characterized by 3-inch “Long Stroke” design. A wise choice for school and transit buses, greater reserve stroke equals increased safety for passengers.

A Leader in Truck Safety—Worldwide.
